

In 1808 John Dalton made his most famous discovery which was, name simply, the Dalton theory

John Dalton

The Dalton theory was a theory on the naturalistic part of matter it stating that all matter was made of small particles called atoms

Dalton's atomic theory also explains the law of constant composition if all the atoms of an element are alike in mass and if atoms unite in fixed numerical ratios, the percent composition of a compound must have a unique value without regard to the sample analyzed.

Dalton's Atomic Theory
